SPECIAL AGENT 1

ERIC HOOPER

DETECTIVE AND FORMER COP

You are a former cop, discharged for bad conduct after an old BioMet investigation, and partially rehabilitated years later thanks to your work in the agency. You still resent the police dept. and the entire justice system for punishing you unjustly. Now,

this new BioMet case is your chance to prove to everybody that you were right, all this time.

PROFILE.

When the game begins, play your introduction scene and respond the following questions (keep one answer for each group, and delete the others). This will be your profile for the game.

What is your SECRET?

- O You were a corrupted cop
- O You are sick and need cure
- O CyberOne Ent. controls you

What's your ATTITUDE?

- O Shoot, then ask
- O Shoot, then regret
- O Painful personal memories

What's your TARGET?

- O Clear your name
- O Stop the BioMet virus
- O Just survive this one

What's your BOND?

- O Dan is a loyal friend
- O You owe Lysa a lot
- O Adam cannot be trusted

SPECIAL MOVE

Once per session, if you do something hardcore, you get +1 Body or Skill for the current scene, and you can decide which one of the 2 rolled dice

is the Wild die.

Used: O

SET THE ADVENTURE

THE GAME

This is a Role Playing CYBERPUNK ADVENTURE, for 4 Players and 1 Master. The game contains a FULL ADVENTURE AND INSTRUCTIONS on how to play and master, plus four pre-generated Characters developed especially for The BioMet Infection.

The game is meant to be played FAST, with LIGHT MECHANICS and simple actions resolution.

THE CITY

The city is a metropolis with over 10 million inhabitants, once a rich industrial center, now in decay due to POLLUTION, CORRUPTION and frequent RIOTS of mutants or cyberpunks, with a large BLACK MARKET for drugs, prostitution, cyber-implants and

illegal weapons. Given its position close to the south border, half the population is is of Latin-American origins. The city is divided in LAYERS: the lowest is called the SPRAWL, the intermediate is HOME to the majority of the regular citizens, and the highest is the KINGDOM of corporations, enterprises, and the city government.

As any other city in North America, this one suffers from widespread criminal enterprises that often are MORE POWERFUL than any police or local government. What criminals cannot achieve through CORRUPTION, they obtain with VIOLENCE. Most of the major CORPORATIONS are somehow involved also in illegal activities.

The regular population is typically powerless; the POLICE and the LOCAL GOVERNMENT are equally corrupted, and work simply to maintain some appearance of order. The SECURITY AGENCIES are the only ones really fighting crime; they do this just FOR THE MONEY, paid by citizens, by the national government, or by a corporation that is trying to put a competitor out of business. The Security

Agencies also have more freedom and higher budgets than the local police forces.

THE SPRAWL

The city LOWEST LAYER and the SOUTH DISTRICT are ruled by criminals and gangs of any sort. Some areas are controlled by mutant rebels and others are ruled by cyberpunk lords. Money can buy you almost everything here in the sprawl, but keep your guard up: in the sprawl, VIOLENCE IS THE ONLY LAW.

THE MUTANTS

Mutants were originally developed as ALMOST BRAINLESS workers: they attended to heavy or dangerous jobs and HAD NO LEGAL RIGHTS.

Things have changed when regular citizens developed mutations too, and new mutants models were produced, with a brain equal to the one of a human.

Now, even though the law grants to the mutants the EXACT SAME RIGHTS as any regular human citizen, most people still look at them as dangerous monsters.

THE CHURCH

Perhaps more popular and RADICAL than in the last century, religion is a powerful social phenomenon. The social instability, the lack of a good instruction level in lower social classes, and a general culture with powerful technologies but low scientific awareness, all works in favor of SUPERSTITIONS, new forms of the old religions, network preachers, etc.

THE CYBERPUNKS

Cyberpunk is a relatively new, but widely spreading trend, both as a fashion and lifestyle choice. Cyberpunks love cyberware, up to the point of abuse; they proclaim the supremacy of technology over anything, and live in a synthetic bubble as much as they can. They transform any kind of social, love and work interaction in a network link, the main issue being the progressive LOSS OF HUMANITY and empathy, until they behave and feel almost like machines.

AVAILABLE TECHNOLOGIES

All the characters will have regular access to technologies such as phones, computers, scanners and such. Unless something goes wrong, they can always be in touch with the other agents, and with the agency. Also, the usage of technology is important in every aspect of the security work, from investigation to fights. If you need something special, just ask O.S.E.

GAME PREP

To play you will need ONE COPY of the game for the Master. You need TO PRINT only the four Characters Sheets for the Players.

A little EXTRA PREPARATION might involve: a copy of the Characters Sheets for the Master, and a copy of the Mechanics for each Player.

As for the dice, the following is required:

- ◆ 1 BLACK D6 (action-die)
- ♦ 1 WHITE D6 (wild-die)

The best would be 1 black and 1 white D6 FOR EACH PARTICIPANT (but dice can be shared, and anyway each set of dice of different colors will do).

Note that the Players should read ONLY the introduction pages and their own Character Sheets.

The Master should keep SECRET ALL THE INFORMATION contained in the last pages, after the Characters Sheets. These pages can be easily recognized by their RED COLOR FRAME.

It is also indicated for Players NOT to read other players' PC sheets.

CYBERRAGE

Too much cyberware causes what's called CYBERRAGE: a tendency of the cyberpunks to behave with no empathy and with most self-ishness, with no respect for life, not even for the loved ones' or their own.

Think of someone on a bad, paranoic and violent trip, but with a metal body: with cybermuscles that can lift a car, with a steel skin one inch thick, with target-seeking eyes interfaced with a gun, with hidden blades in the forearms, etc. You get the picture.

New Technologies

Feel free to introduce NEW TECHNOLOGIES during the game. This is part of the fun of playing a cyberpunk game. The game does NOT provide a list of items to purchase nor a selection of technologies, but lets the GM and the Players to introduce new elements. Just remember to keep the balance: what is available to the characters, is to the enemies.

SPEAK WITH O.S.E.

The agency has an AI (Artificial Intel.) called O.S.E. (Operation and Strategic Engine). When you speak to the GM, call him O.S.E.. and do your best to stay in-character. O.S.E. can be a powerful source of information and a valid analysis tool: use it.

THE BIOMET CASE

THIS ADVENTURE

This adventure is about the work of four special agents (the characters), investigating about the death of an important scientist, and facing a mysterious nanoid virus called BioMet (such as the company that allegedly produced/leaked it). The adventure does

NOT provide a solution or criteria for success.

How the adventure will evolve is up to the players.

THE BIOMET ENTERPRISES

BioMet was founded almost 30 years ago, by a group of scientists sponsored by the national government. They were the first to be able to produce, over than ten years ago, CYBERNETIC IMPLANTS (cyberware) that could be made available TO THE MASS of

the population. Forcing their way through the scientific community doubts, the RELIGIOUS OPPOSITION, several scandals and incidents, the company made a fortune: cyberwares are now COMMON not only for medical purposes, but for entertainment, work, and of course crime.

A couple of years ago, the BioMet founders have SPLIT their company into several MINOR ENTERPRISES, and shortly after a strong commercial war has begun between the various child corporations. Some were run out of business, others merged to face the opponents, some maintained their market share with increased specialization on cyberware production.

This caused sometimes a SHORTAGE in cyberware or spare parts, more often an OVERPRODUCTION that drove prices EVEN LOWER. The official explanation for the events is that the various people in charge had different opinions on how to run the business and technical divergences that drove them apart, although the press was convinced that there were ultimately some serious financial benefits in what appeared

to the public just as some inexplicable wild and crazy maneuver. SECURETECH: a large security corporation that works closely with the local police and administers the local prison.

OTHER CORPORATIONS

NANOMEDICAL: one of the most famous nanoids developer and producer, leader in the medical sector.

GENO-LAB: the local research center on mutations, linked to several other minor corporations that produce work mutants.

AIRMETAL: an Asian weapon producer; their guns are light, cheap and disposable, and can often bypass security checks.

WAREK: the most popular producer of cyberware in the area: their products are solid and affordable.

CYBERONE: elite cyberware, very fashionable and expensive, offer cutting-edge technologies.

MOVEFAST: taxi and delivery

services all over the city. Includes local air transport.

ZERO: franchise of popular and

cheap night-clubs.

YOURPLEASURE: a chain of sex clubs and shops. Offers mutants and cyborg illegal prostitutes.

THE FIRST BIOMET CASE

When BioMet broke into multiple companies, there were serious rumors and careful investigations about a certain NANOID VIRUS that infected cyberware and could cause the cyberware to grow like a cancer in the human host body. For some time the rumors remained unconfirmed and the investigations ceased, but now reports start to mention <code>MetZ</code> again.

Тне МетZ

MetZ are the VICTIMS of the BIOMET VIRUS infection. Their existence was reported as early as a few days after the BioMet Ent. split into several minor companies.

Still, their existence was NEVER CONFIRMED by the local government and security forces. Also the scientific community remains skeptic about this subject.

A New Development

Two days ago the president of one of the BioMet spin-off companies died in an aircar crash. He was a valid scientist, known among his peers but not familiar to the general public. A local SECURITY AGENCY was sent to investigate and an earnest agent ran additional checks on the victim's body. The corpse was determined to be the one of A MUTANT, engineered as an almost perfect clone of the scientist.

The agent was murdered by a MYSTERIOUS KILLER shortly after his discovery, but the shocking information reached the agency headquarters.

Now the mutant/scientist body DISAPPEARED, and your four agents are CALLED TO INVESTIGATE.

INTRODUCTION SCENE

You start the game in the AGENCY HEADQUARTER, on level 3. All four special agents are in the BRIEFING ROOM to receive the assignments for the mission. The agency will investigate the case without getting involved with the local police. Every important discovery must be IMMEDIATELY communicated to the agency. The agency director gives the basic information about the crime (see above) and then exchange ideas with the special agents.

The four Players will try to define and set their PROFILE in this part of the game, to present their characters to the others and clearly set a tone for their play-style.

WHO'S IN CHARGE

Towards the end of the Introduction scene, the agency director will appoint one of the agents as the LEADER for the investigation. All others must follow orders, although this is bound to create some FRICTION. Later in the game, things might CHANGE and someone else might be put in charge of things.

IMPORTANT QUESTIONS

When beginning to investigate, there are several elements to keep in consideration, and key questions to respond to. To help your characters to get started, consider the following points:

- ♦ What's with the clone? ♦ Why was it in place of the scientist? ♦ Who put it there? ♦ Is the scientist still alive?
- ♦ Why BioMet split? ♦ Is this related to what's happening now? ♦ Could the new companies be related to what's happening?
- \$\phi\$ Who sent the assassin after the first agent? \$\phi\$ Was the assassin too late to stop the info about the clone to reach the agency? \$\phi\$ Or was he sent to prevent further discoveries?
- What about the virus? Why does it appear in the reports again? Is it connected to the scientist death? As a cause, or perhaps as a consequence?

MECHANICS FOR PLAYERS

ACTIONS AND COBMAT

When you perform a critical action, you act to influence the plot, fight an active opponent, describe what you'd like to do and ROLL 1 ACTION DIE AND 1 WILD DIE. The GM can apply a modifier to your roll depending on the action's DIFFICULTY or the

STRENGTH of your opponent. Powerful ememies will require multiple hits

before they are taken down.

WILD DIE

The Wild die also will help you and the GM to narrate the story. See the Wild die result, depending on the outcome:

For SUCCESS [10+]:

3- \$\psi\$ the GM describes how you succeed; COMBAT: inflict +1 damage 4+ \$\phi\$ you describe how you succeed; COMBAT: inflict +2 damage For SUCCESS WITH COMPLICATION [7-9]

3- \$\phi\$ the GM describes a trouble; COMBAT: you're at disadvantage 4+ \$\phi\$ you describe a minor trouble; COMBAT: in balance against your enemy (Remember: both take +1 damage)

For FAILURE [6-]

3- \$\psi\$ the GM describes the serious failure; COMBAT: suffer +2 damages 4+ you describe your failure; COMBAT: suffer +1 damage

DEAL WITH DAMAGE

The damage is equal to the WEAPON DAMAGE, +1/+2 according to the Wild die. Your PROTECTION (if you have it), takes the first damage(s). When exhausted the protection, then you mark HIT POINTS and finally K.O. You are

NOT dead, until some horrible event or

unless YOU choose it.

OTHER CONDITIONS

Depending on the fiction, a wound can be serious (mark WOUNDED) or another CONDITION might be inflicted, with the related modifier to the attribute. You can decide to force the fiction to inflict a Condition on your Character, as replacement to another complication proposed by the GM. You can do it only for the condition RELATED to the Action, and only once per kind.

CONFLICTS

When you OPPOSE ANOTHER CHARACTER, each Player rolls 2 dice, adds the relevant Attribute and the traits and tools, like for any other action. If one is in CLEAR DISADVANTAGE, the GM can assign from -1 to -4.

The Player with the HIGHEST SCORE WINS the conflict. The victory margin depends on the score difference.

If both obtain the SAME SCORE, it's a tie. It means something happened (i.e. time passed) but there's no clear winner. Usually this calls for an ESCALATION.

EVO POINTS

You gain EVO by playing IN-CHARACTER: talk, interact, act, move, do anything be loyal to the choices you made for your profile at the beginning. You \$\phi\$ TAKE 1 EVO if you reinforce your character profile, you \$\phi\$ TAKE 2 EVO if this causes you danger or damage. If you act against a profile detail and want to resolve it, \$\psi\$ TAKE 3 EVO, and erase it. It will no longer give you Evo and this story element is solved. You \$\phi\$ TAKE 1 EVO also when

you roll 1-3 on your Wild die, and \oplus TAKE 1 EVO at the start of every session.

EVO is spent to recover, when FICTION allows it. Find a doctor, a mechanic, or what you need, and \$\phi PAY | EVO to get back | Hit Point, or | point of Protection, or cure a Condition, or refresh your Move for ANOTHER USE in the same session, or fix something. If you need a doctor URGENTLY, & PAY I EVO to force GM to drive the fiction to provide it.

You can spend EVO POINTS to IMPROVE your character: PAY 5 Evo to buy one additional point for a Trait, or add a new Trait, PAY 3 Evo to buy or acquire a better weapon, a better tool, a new piece of equipment, when possible in fiction.

Do Something Cool

If you find yourself wondering what can you do in a specific situation, think as your character Think for example: Dan has a molecular would: what's his specialty? His secret? His connections? Whenever you want to do something blade hidden in his cross, Eric has a friend that looks COOL FOR THE STORY, just say it. It would probably be at your benefit, and that's all in the police who owes him a favor, Lysa's right. If the GM finds it appropriate, and if it's not too much of stretch, you get what you connections can find someone lost in the want from the fiction, and \$\phi\$ PAY 1 EVO.

sprawl, Adam has a secret weapon, etc.

How To Introduce Technologies

To introduce a new technology, a Player needs to describe it with The GM never pays to introduce elements in the story. Players pay another player blocks it with a VETO, in considered available.

WHEN TO PAY EVO

details, and PAY 1 EVO. This technology then, unless the GM or 1 Evo, for example to introduce a doctor or a technology, only if the element is useful to them, and was not mentioned before.

DIFFICULTIES

-1 ♦ Average -4 + Hard -5

Extreme -2 ♦ Difficult -6 + Impossible -3 ♥ Very Difficult

RESULTS

10+ ♦ Complete Success 7-9

Success and Complication 6- # Failure

OUTCOME

Sum the 2 DICE results; add to them the relevant ATTRIBUTE score, +1 for EACH APPLICABLE trait and tool (or more for special ones). Subtract the difficulty and see the result.

♦ Success means you achieve your target; \$\phi\$ with Success AND COMPLICATION you get what you want but suffer some it's no success at all. In COMBAT:

with Success you hit, • with COMPLICATION you hit and you are also hit back; ϕ with FAILURE you are the only one taking

damage.
